

Oracle SQL Developer Patch Instructions

As recently communicated, PenLink has assessed the impact of the Apache Log4j Security Alert CVE-2021-44228 vulnerability.

Though this has not affected any of our PenLink products, Oracle has identified a vulnerability with the SQL Developer utility. Some PenLink employees utilize SQL Developer as a means of accessing the Oracle database for troubleshooting purposes.

A patch for this vulnerability has now been made available.

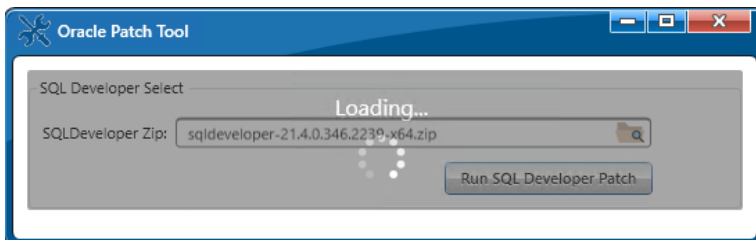

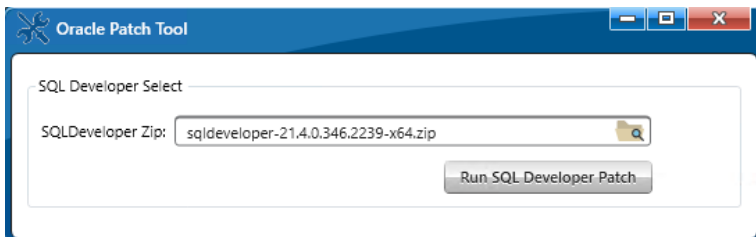

As a precaution, we recommend installing this patch on the PLX Database Server.

Note: *PLX availability will not be interrupted. This patch installs to a utility in the background only.*

1. Click to **Download**: <https://www.dropbox.com/s/79yjpgz7nxcfczr/SQLDeveloperPatchTool.zip?dl=1>
2. **Extract** the .bat file from the ZIP.

3. Right-click the SQLDeveloperPatchTool.bat and select **Run as Administrator**.
4. Click **Run SQL Developer Patch**.

5. A popup will confirm the install is complete.
